📍 Nairobi, Kenya

Professional Summary

Resourceful and passionate Computer Science graduate with extensive hands-on exposure to enterprise technology, cloud infrastructure, AI models, and secure data systems. Highly trained in deploying Kubernetes and managing Linux environments, developing robust full-stack applications, and applying data science principles to solve real-world challenges. Brings a well-rounded skillset spanning user support, software engineering, and system integration, gained through academic projects, certifications, and a technical internship at a regional peace support institution. Proven ability to learn rapidly, collaborate effectively, and adapt in high-demand environments.

Core Competencies

• Programming Languages: Python, JavaScript, Java, PHP, SQL, Bash
• Frameworks & Libraries: React, Node.js, Express, Flask, Django, TypeScript
• Cloud & DevOps: Kubernetes, OpenShift, Docker (Basic), GitHub Actions
• Systems & Tools: Linux, Windows Server, Microsoft 365, MongoDB, MySQL
• Data & AI: Machine Learning, AI Fundamentals, Data Engineering, Data Visualization
• Cybersecurity: Intro to Risk Management, Secure Networking
• Soft Skills: Communication, Critical Thinking, Teamwork, Presentation, Leadership, Problem Solving

Experience

IT Support Intern | International Peace Support Training Centre (IPSTC), Nairobi
Jan 2025 – Apr 2025 | On-site
- Provided Tier-1 support across network, hardware, and Windows environments for 40+ users.
- Maintained and troubleshot Microsoft 365 email systems, Windows Servers, network printers, and CCTV systems.
- Delivered real-time user support for ongoing peacekeeping training sessions.
- Collaborated in system maintenance, including installation, diagnostics, and preventive IT audits.
- Demonstrated high professionalism, strong work ethic, and teamwork praised in formal recommendation by departmental leadership.

Projects & Technical Solutions

• MyMental – Developed a responsive mental health chatbot using OpenAI API and MongoDB, providing users with secure, anonymous access to resources.
• MyChat – Built a PHP-based bulk messaging system with secure transmission protocols, ideal for large-scale internal communication.
• Antique Café CRM – Designed a Node.js and MySQL-based customer relationship platform with real-time analytics and document exports.

• Telecom Churn Prediction – Utilized Pandas and Scikit-learn to construct and evaluate a predictive model identifying customer churn patterns.

Education

Bachelor of Science in Computer Science | Kabarak University, Nakuru, Kenya
2021 – Expected Dec 2025
Focused Coursework: Cloud Computing, Cybersecurity Fundamentals, Algorithms, Software Engineering, AI, Full Stack Development

Certifications & Professional Development

• Kubernetes and Cloud Native Associate (KCNA) – Linux Foundation (2025–2027)
• Kubernetes for Developers (LFD259), Linux Essentials (LFS101), Cloud Native Essentials (LFS250)
• Containers and OpenShift – IBM SkillsBuild | Python for Data Science – IBM | AI Fundamentals – IBM
• Relational Database Design, Algebra & Calculus for Data Science – Univ. of Colorado Boulder
• Node.js, React.js, MongoDB, Java Essentials – LinkedIn Learning | Cybersecurity – Univ. of Maryland
• Responsive Web Design Certification – freeCodeCamp
• Topics: Mathematics, Business, Programming, Branding
